# VELKOMMEN TIL TEMPRAKON ZONE

Søvn er afgørende for vores velvære, sundhed og energi i hverdagen. Temprakon Zone er udviklet baseret på den nyeste teknologi, viden om søvn - kombineret med det bedste fra naturen.

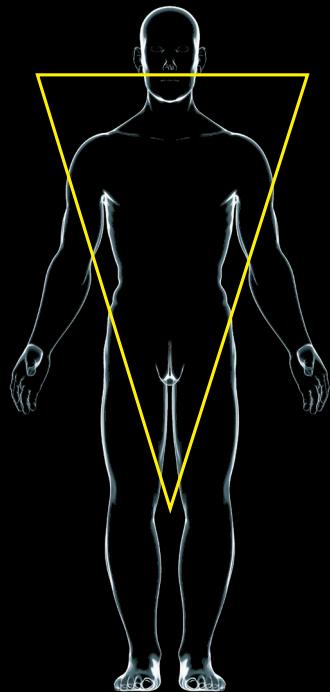

Temprakon Zone supplerer kroppens temperaturzoner.  
Den ultimative serie af dyner, puder og rullemadrasser.

# WELCOME TO TEMPRAKON ZONE

Sleep is essential for our well-being, health, and energy in everyday life. Temprakon Zone is developed based on the latest technology, knowledge of sleep - combined with the best from nature.

Temprakon Zone compliments the body's temperature zones.  
The ultimate range of duvets, pillows and downppers.

# HEAT ZONE

DK En af kroppens måder at sikre en konstant temperatur på er varmestråling fra hudens overflade.

Kroppen sender varme til huden, som derefter udsendes som strålingsvarme.

Mens du sover, ændrer din krop temperatur og kroppen har et skiftende behov for at slippe af med varmen.

En konstant temperatur sikrer en mere jævn og rolig nats søvn.

UK One of the body's ways to ensure a constant temperature is heat radiation from the skin's surface.

The body sends heat to the skin, which is then emitted as radiant heat.

As you sleep, your body changes temperature and the body has a varying need to get rid of the heat.

A constant temperature ensures a more even and calm night's sleep.

## TEMPERATURE BALANCE

Temprakon Zone har små mikrokapsler på våret og i fyldet i dynerne. De reagerer på temperaturen. Er kroppen varm - absorberer de varmen. Er kroppen kølig vil de frigive varme. Det sikrer en mere jævn temperatur og en bedre søvn.

Temprakon Zone products have small microcapsules integrated with the shell and in Temprakon Zone duvets additionally as part of the Temprakon Down filling. The microcapsules respond to the temperature. If the body is hot - they absorb heat. If the body is cool they release heat. This ensures a more even temperature and a better sleep.

## INSTANT COOL

Temprakon Zone har ekstra cool effekt i den varmeste zone omkring kroppen. Det sikrer, at produktet hurtigere kan regulere kropstemperaturen.

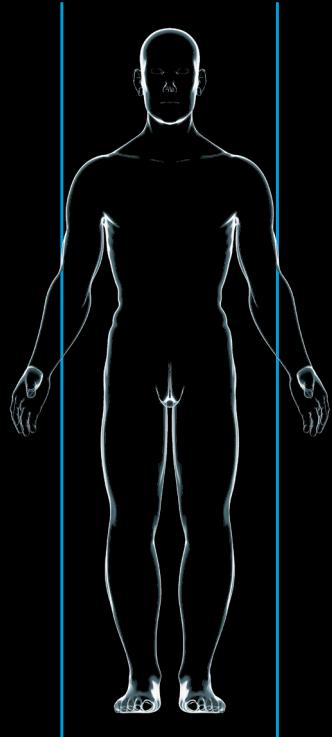

Temprakon Zone has an extra cooling effect in the warmest zone around the body. This ensures that the product can control the body temperature more quickly.

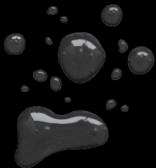

## NATURE AND TECHNOLOGY

Temprakon Zone kombinerer det bedste fra naturen og den nyeste teknologi. Temprakon mikrokapsel teknologien anvendes sammen med et Lyocell viskose materiale som er skabt på basis af naturlige træfibre. Dun fyldet er certificeret efter de højeste dyreeтика standarer.

Temprakon Zone combines the best of nature and state-of-the-art technology. The Temprakon microcapsule technology uses Lyocell viscose material as carrier. Lyocell is made from natural wood fibres. All our down filling meet the highest animal-ethical standards.

## BREEZE ZONE

DK Kroppen regulerer også temperaturen gennem fordampning fra huden.

Kroppen sender varmen til hudens overflade, og her frigives det som fugtighed.

Kroppen afgiver ofte mere end 1/2 liter væske om natten.

Det er derfor vigtigt, at soverummiljø produkter kan absorberes fugt og lede det væk fra kroppen.

UK The body also regulates the temperature through evaporation from the skin.

The body sends the heat to the skin's surface, and here it is released as moisture.

The body often releases more than 1/2 litre of fluid at night.

It is therefore important that sleeping environment products can absorb moisture, and direct it away from the body.

## MOISTURE CONTROL

Temprakon Zone teknologiens mikrokapsler hjælper med at sikre et mere balanceret fugt klima. Det giver et optimalt tørt og friskt sovemiljø, som skaber de bedste betingelser for en god nattesøvn.

Temprakon Zone technology microcapsules help to ensure a more balanced moisture climate. This provides an optimum dry and fresh sleeping environment that creates the best conditions for a good night's sleep.

## BREEZE FACTOR

Temprakon Zone tilbyder bedre åndbarhed i produkterne. Det sikrer, at overskydende varme, fugt og damp lettere ledes væk fra kroppen.

Temprakon Zone offers better ventilation which allows the body to breathe better and to evaporate excess heat, humidity and moisture easier.

## NATURAL AND FRESH

Fugt er det optimale klima for støvmider. Det unikke Temprakon fyld i dynerne er kombineret med en space certificeret Temprakon fresh teknologi. En effektiv antimikrobiel teknologi, der eliminerer støvmider.

Moisture is the optimal climate for dust mites. The unique Temprakon filling used in duvets is combined with a space-certified Temprakon fresh technology. An extremely effective antimicrobial technology which eliminates dust mites.

# THAT'S ONE SMALL STEP FOR MAN, ONE GIANT LEAP FOR MANKIND

DK Nogle gange er den mindste innovation den største revolution. Temprakon blev oprindeligt skabt med teknologien og mikrokapslerne fra NASAs rumdragter, der hjalp astronauter til at regulere temperaturen under ekstreme forhold i rummet. Temprakon sætter nye standarder for sovemiljø produkter - og har i mere end 15 år givet bedre søvn til tusindvis af kunder.

Temprakon Zone serien har taget rumteknologi til nye højder.  
Et lille skridt tættere på den perfekte søvn.

UK Sometimes the smallest innovation is the biggest revolution. Temprakon was originally created with the technology and microcapsules from NASA's space suits that helped astronauts regulate temperature under extreme conditions in space. Temprakon sets new standards for sleeping environment products - and for more than 15 years has provided better sleep to thousands of customers.

The Temprakon Zone series has taken space technology to new heights.  
A little step closer to the perfect sleep.
